Straight from Silicon Valley, this engineer explains how to stop paying inflated electricity prices and slash your bills by 90%

Oliver Smith - Journalist at EnergyNews since 2018, published on 25 July, 2025.

Tired of shelling out big bucks for your electricity bill every month? Wish you could put that money to better use without compromising your lifestyle? Look no further – a brilliant mind has come up with a solution to drastically cut power usage and save you a heap of cash!

We had the exclusive chance to interview them for [EnergyNews](#) following their return from Melbourne's tech scene. In this article, we'll reveal how you can legally slash your electricity bills in a big way.

Who is Richard, the Americann genius who developed a method to cut electricity costs?

Richard is often compared to visionaries like **Mark Zuckerberg, Bill Gates, or Elon Musk**. He graduated with an engineering degree two years ahead of his peers and, in 2020, headed to Illinois's tech scene to launch the next startup that would transform the industry.

There, he quickly teamed up with two other talented engineers to develop a solar system that anyone could install at home for under \$150.

However, they soon realised the project was doomed to fail—**the cost of electronic components made it financially unviable**.

That's when Richard had his lightbulb moment: rather than helping people generate energy, why not prevent unnecessary energy consumption?

This led the team to create a device that optimises electricity usage so effectively it [can cut power bills for most households by up to 90%](#).

Say goodbye to sky-high electricity bills with VeltaFlow

"I had no idea I'd be spending so much on my electricity bill each month! I'm so glad I've got VeltaFlow on sale – extra savings! It was a real lifesaver, especially with how expensive everything's getting these days. I'm actually waiting for my second VeltaFlow—it's such a great gift idea!"

Allen Smith

"Who would have thought something so small could make such a big difference? It's definitely worth every cent, and with the savings you'll make, you won't even notice the price you paid!"

Ella Johnson

"I run a small business from a tiny office, and even though there's only three of us, our computers were racking up a huge bill every month. VeltaFlow has literally turned my business around! Best investment I've ever made!"

Hazel Williams

Three months later, it was an overwhelming success. **First in California, then in Texas, and finally in Indiana**, everyone was talking about this incredible device that allowed thousands of households to cut down on their electricity usage without changing their daily routines.

What's this device that can slash your power bill by 90%?

Here's what the [VeltaFlow](#) device looks like. It's a small box that plugs into any power outlet. The best part is, anyone can benefit from it, whether they live in an **apartment, house, or caravan**.

All you need is a free power point.

Once the [device](#) is plugged in, it immediately stops unnecessary energy from flowing through the electrical cables.

Household appliances often use more energy than needed due to disturbances in the electrical current.

[VeltaFlow](#) minimises these disturbances and reduces the amount of wasted electricity. It doesn't affect your meter readings or steal power; **it simply makes energy usage more efficient**.

How does it work exactly?

Just like plugging in any other electrical device, you simply plug the [VeltaFlow](#) device into an outlet, and it starts analysing and optimising your power usage (**you'll only notice the difference when you see your bill**).

Here are the instructions:

1. Find an unused power point

2. Plug the [VeltaFlow](#) device into the outlet
3. Leave the ElectraWise device plugged in **24/7** and enjoy up to **90% savings** on your electricity bill without changing your usage habits.

If you want to move it, simply unplug the device and plug it into a different outlet. It's that easy.

P.S. A detailed user manual is included with the product.

How much could you save with VeltaFlow?

It's hard to estimate exactly how much you could save with [VeltaFlow](#) since we all have different power usage and appliances.

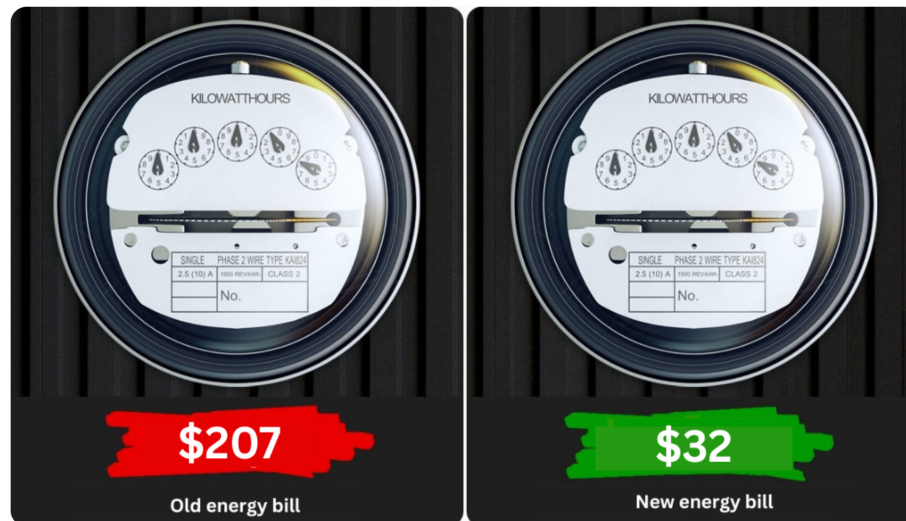

However, to give you an idea, we installed the VeltaFlow device in **two different homes** and compared the electricity bills from one month to the next.

First test: A two-bedroom apartment (couple) of 55m²:

Before VeltaFlow, the average monthly bill was \$180. After installing [VeltaFlow](#), the next month's bill **dropped to \$32**, a reduction of nearly 82%, without changing the use of appliances. That's over **\$1,200** in savings annually (exactly \$1,211.63), which is a significant amount.

Second test: A house for five people (two parents and three children) of 145m²:

Before VeltaFlow, the average monthly bill was \$480. After installing [VeltaFlow](#), the next month's bill **dropped to \$63.50**, a reduction of 91%. That's over **\$3,500** in savings annually, which is a substantial amount for a family household.

One thing's for sure: the device **saves money 100% of the time**. In the worst case, you'll save around 80%, and in the best case, savings can exceed 90%.

One last thing to note: for spaces under 70m², just one [VeltaFlow](#) unit is enough, but for larger rooms, you can use multiple units to maximise your savings.

Is it safe? Is it legal?

As mentioned, the device simply optimises the electrical current to prevent unnecessary energy consumption. It's not a device that manipulates the power meter. If it weren't legal, the company wouldn't be allowed to market it.

So, the device is **100% legal and risk-free**. You're fully entitled to purchase it. If for any reason you want to stop using it, just unplug it.

As you might expect, electricity providers aren't thrilled about this product hitting the market and will do everything they can to keep you from hearing about it. However, they can't legally stop you from owning it or saving on your energy bills.

What's the price and delivery time?

The company has set the price of the [VeltaFlow unit at \\$39.95](#). While this may seem expensive at first, it proves to be highly cost-effective in the long run, as it **saves you money every month**. For most households, the unit has already paid for itself within two months.

Here's what they're saying after installing [VeltaFlow](#):

"I'm honestly blown away by how well this little device works. I still can't believe it's not more well-known – I'd never even heard of it before I bought it. It's only been a month since I started using VeltaFlow, but my bill has already dropped by more than half compared to last month. It's honestly incredible. Thanks to VeltaFlow, I'm saving almost \$50 a month, and my purchase has already paid for itself in less than a month."
-William, 44

"I've got a mate who works at Total, so I already knew the power and gas providers are making a killing, but I never realised just how much. With just one VeltaFlow unit, I've slashed my bill by 88%, and a mate who bought one as well has cut his by 90%. It's absolutely nuts! I'm telling everyone I know so they can benefit too."
-Daniel, 61

"If I had to recommend just one product this year, it'd definitely be the VeltaFlow unit. It paid for itself in less than a month with all the savings we've had, and now that power's cheaper, we can afford to use more than before."
-Alex, 35

Conclusion: What should we make of this magic box that lets anyone lower their bills?

Like it or not, the [VeltaFlow](#) unit is a real game-changer in the energy sector. It's safe to say that in a few months, everyone will have one and be saving big **(which won't sit well with the big energy companies)**.

In our opinion, it's a top-notch product, and we can only praise Richard for his brilliance in helping thousands of households save money without changing their consumption habits.

How do you get one?

Getting your hands on one is simple: you can order it directly from the VeltaFlow website, the only place that sells this product.

The [VeltaFlow](#) unit comes with a **90-day money-back guarantee**, so there's no risk in giving it a go! If you act now, you can take advantage of an incredible 50% discount.

Don't wait, grab VeltaFlow at a bargain price now!
